

Connect to the New World of Outcome-Driven Buildings

Buildings today are full of hidden potential. They have energy coursing through their veins – heating, cooling, lighting. This energy produces data, and that data is like a language waiting to be translated. Once it is deciphered, it is full of valuable information and insight. When you understand what your building is saying – decode its messages and go beyond the data – you can transform that building into a stronger asset. Your building becomes an asset that can positively impact your goals.

Trane® is the industry leader in Connected Building Solutions.

At Trane, we go beyond unparalleled HVAC systems. Beyond industry-leading automation and energy management solutions. Beyond local engineering expertise. We go beyond basic knowledge to understand how buildings can work better to help businesses succeed.

Connected Building Solutions

Our holistic and robust solutions save energy, save money, keep people comfortable and increase uptime. Providing the data you need to make key operational decisions that are aligned to desired business outcomes – delivering documented results.

Building Controls

When you have better control, your building becomes a more energy efficient and comfortable place to work. Using technology such as sensors, equipment and automation; teamed with connective services and expertise. A building owner has access to data at their fingertips to gain the insight that delivers energy goals.

Remote Command

Building activities ebb and flow all day and night. Trane's dashboards and mobile interfaces allow you to securely access current information and run systems remotely, giving you more freedom and increasing productivity.

Integrated Building Systems

In Connected Buildings, everything works together to provide cohesive communication and assimilated management. With a wide range of scalable applications that simplify the integration of our systems to other building systems – lighting, security and water – both existing and new.

Building Optimization

Any building can run better and the path to improvement can be found in the data. Once we get connected to the data sources, Intelligent Services can provide the analytics that indicate where your building is running well, areas of improvement and what you can do about it. Trane can also create the customized reports you need to support your operations.

Buildings are increasingly complex, and it takes a team of specialized advisors to make systems work their best. Trane delivers Connected Building Solutions through centralized engineering, combined with local design, installation and service expertise. You can stay connected with Trane on a continuous basis. 24/7 monitoring by Trane advisors helps us solve many issues more quickly and efficiently, minimizing the impact on your business.
